822-854 系列喷嘴

Series 822-854

Mod. 822-854

两流体喷嘴/全锥形/外混型
Two-Substance Nozzles / Full-Cone / External Mixing

此系列喷嘴适用于 高粘度流体雾化

822-854系列喷嘴的液体最小流量是940和970系列喷嘴的最大流量,此系列喷嘴用于需要较大雾化面积的情况,雾化气体的消耗也大。

使用822-854系列喷嘴用于大面积雾化时,雾化介质采用压缩空气、煤气或蒸汽(0.5bar以上)

基于液体的粘度、密度和表面张力,液体可采用真空吸入也可通过压力泵入,某些情况下,此系列喷嘴也可用作喷射喷嘴

外混型二流体喷嘴,可以单独控制流量大小和雾化液滴大小。

此系列喷嘴,流量大小基本都是通过压力差控制的。在带有针阀的喷嘴型号(设计形式1)中,流量也可以通过针阀的调节来调节

822-854系列喷嘴有两种设计

High performance for a range of viscosities

The performance range of the SCHLICK model series 822-854 begins at the upper limits of model series 940 and 970. Two-substance units are used throughout this range, where a large reaction or exchange surface is needed by large air flow rates.

With the SCHLICK model series 822-854 the liquid is applied to a large specific surface using compressed air, gas or steam – from 0.5 bar (g).

Depending on the viscosity, density and surface tension, the liquid can be aspirated over a gradient or fed under pressure. Within certain limits, the nozzles can also act as injectors.

External-mix two-substance nozzles allow independent control of the flow rate and fineness of the atomisation.

The flow rate for all models is controlled through the current liquid pressure difference. In the model with a regulating needle (design 1) the flow rate can also be regulated in accordance with the needle setting.

There are two possible designs of nozzle system.

	雾化形状:	实心锥形
	喷雾角度:	20° - 40° (也可通过尾部旋钮调整)
	液滴大小:	20 - 200 微米
	处理量:	0,3 - 40 升/分钟
	标准喷嘴孔径:	2,0 / 3,0 / 4,0 / 6,0 / 8,0 / 10,0 mm 孔径也可根据客户定制

	Spray pattern:	circular full-cone
	Spray angle:	20° - 40° (also adjustable through shaft position)
	Droplet size:	20 - 200 µm
	Capacity:	0.3 - 40 l/min
	Standard orifices:	2.0 / 3.0 / 4.0 / 6.0 / 8.0 / 10.0 mm Customized bore sizes on request

设计形式0的喷嘴为中心进液
设计形式1的喷嘴带有针阀

设计形式0的喷嘴, 没有预雾化, 适用于高粘度流体的雾化, 可根据设置调节能力、污染风险和流体粘度情况, 加装涡流旋转体, 或者三槽涡流旋转体, 安装三槽涡流旋转体可以获得较好的预雾化效果, 但同时会存在液体堵塞的风险。

在设计形式1中, 也可以通过调节针阀来调节液体流量大小。

Design 0 with central liquid feed and Design 1 with a liquid regulation needle:

Design 0 – without pre-atomisation – is especially well suited to the atomisation of highly viscous media. Depending on the ability to regulate, the contamination risk and the viscosity, a full-cone swirl chamber or even a three-slotted swirl chamber can be fitted for atomisation. The three-slotted swirl chamber provides better pre-atomisation but is more susceptible to blockages.

With design 1 the liquid flow can also be set using the liquid-regulating needle.

喷嘴采用头部螺纹设计, 易于固定在法兰或容器壁上

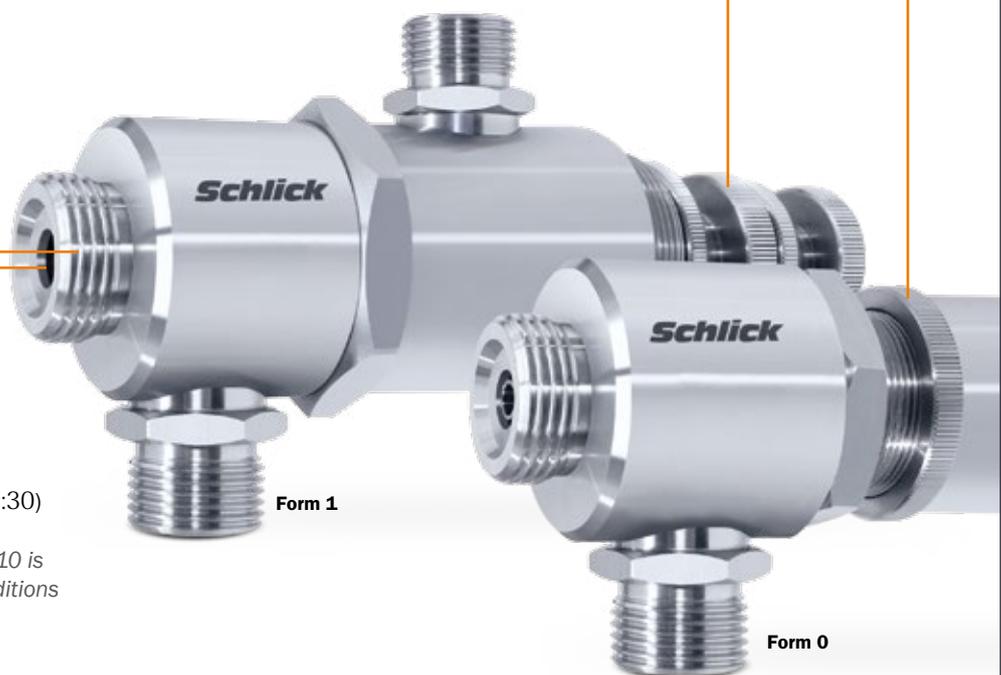

Standard set-up with rear screw thread for easy installation to a flange or container wall.

通过调整针阀旋钮, 雾化角度可在20°~40°之间调节

The scatter cone can also be set between 20° and 40° through the shaft position.

液体控制范围可以是1:10 (在某些情况下也可以达到1:30)

A liquid control range of 1 : 10 is possible (under certain conditions also 1 : 30).
