940系列模块化喷嘴

Module System Range 940

Mod. 940

双流体喷嘴/全锥形/外混型
Two-Substance Nozzles / Full-Cone / External Mixing

全方位的， 几乎能用于所有雾化场合

940系列喷嘴，可采用压缩空气、煤气、蒸汽进行雾化(0.5bar以上)，雾化面积大

基于液体的粘度、密度和表面张力，液体可采用真空吸入也可通过压力泵入，某些情况下，此系列喷嘴也可用作喷射喷嘴

外混型二流体喷嘴，可以单独控制流量大小和雾化液滴大小。

此系列喷嘴，流量大小基本都是通过压力差控制的。在带有针阀的喷嘴型号，流量也可以通过针阀的调节来调节

此系列喷嘴全部采用模块化结构。这意味着它可以很容易地改造成其他型号的喷嘴。而且每个零件都可单独更换，不影响雾化效果。

The all-rounder, our nozzle for nearly all applications

With the SCHLICK model range 940, the liquid is applied to a specific large surface using compressed air, gas or steam – from 0.5 bar (g).

Depending on the viscosity, density and surface tension, the liquid can be aspirated over a gradient or fed under pressure. Within certain limits, the nozzles can also act as injectors.

External-mix two-substance nozzles allow independent control of the flow rate and fineness of the atomization.

The flow rate for all models is controlled through the liquid pressure difference. In the model with a regulating pin, the flow rate can also be regulated by the pin setting.

The SCHLICK model 940 is manufactured as a modular construction. This means that it can easily be rebuilt into other designs. Replacement parts are available for all individual parts, with reproducible results ensured.

通过调整风帽位置，雾化角度可在10°~40°之间调节

将风帽向后旋，雾化气流量变小雾化角度变小；
将风帽向前旋，雾化气流量变大雾化角度变大

根据实际应用，
通过调试来确定风帽位置

风帽处于位置0 = 无雾化气，喷嘴关闭
风帽处于位置5 = 正常设置

The scatter cone can be set between 10° and 40° through adjustment of the air cap position.

By turning the air cap backwards, the air flow rate is reduced and the scatter cone becomes more focused. By turning the air cap forwards, the air flow rate and scatter cone become larger.

Depending on the intended use, the required cap setting must be determined through trial and error.

Cap setting 0 = nozzle closed
Cap setting 5 = normal setting

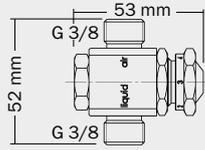

940系列喷嘴均可选用加长喷芯，有利于粘性液体的雾化以及最大程度减少喷嘴处的结须。

All nozzle forms can also be delivered with extended liquid inserts. These optimise the atomization of tacky liquids and minimise build-up at the air expulsion hole.
